BackOffice Associates® Solutions

Release Notes

Version 6.5.3

Software Release Date: 9/01/2016

Version 6.5.3 contains various fixes to existing features, including:

- An issue occurred when syncing a target between Target Design and Map. After an initial sync, if the sync process was run again, the process took longer than expected to complete. Updates were made to correct the issue, and the second time a sync process runs, it now completes in an acceptable amount of time. [DSP-7309]

- A default setting for hover views at the page and page column level has been changed. Hover view text is now escaped, i.e., is not rendered as HTML. If a hover view's text must be displayed in HTML, the user must add a View Type of Hover view to the column and assign it a control type of HTML area. [DCR-583]

NOTE: Due to the changes in the naming of the Data Services objects (datastores, jobs and data flows) to improve the integration of the DSP™ and Data Services, the Collect Packages using Data Services as the package type (both RFC and standard) **must be rebuilt** from Collect in the DSP™ application.
