## Overview

From Stewardship Tier version 7.4.3 onwards, the Source Relevancy pages detailed in this guide will be installed automatically. These new pages will not be automatically installed on Stewardship Tier instances that are being upgraded to version 7.4.3 or above. Instead, a Source Relevancy Solution Pack that includes the Source Relevancy pages can be requested from Syniti Support by raising a support ticket and requesting the 'SourceRelevancySolutionPack.zip'.

**IMPORTANT!** The Source Relevancy pages are installed in the DataConstruction webapp. This webapp is a custom, client owned application that gives customers the opportunity to make changes to standard delivered Source Relevancy pages to support their specific requirements. These changes will not be overwritten during an upgrade of the Stewardship Tier.

## Install Source Relevancy

The Source Relevancy Solution Pack can be installed on Stewardship Tier versions 7.1.4 and above. Before proceeding with this installation, the user performing the installation should check whether the Source Relevancy pages already exist within the Construct webapp.

Perform the following steps to download and install the Source Relevancy:

1. Download Source Relevancy Solution Pack
  - Raise a support ticket at <https://support.syniti.com> requesting the Source Relevancy Solution Pack
  - Syniti support will provide a download link from where the Solution Pack should be downloaded
  - Download the Solution Pack onto the Stewardship Tier Application Server
2. Install Source Relevancy Solution Pack
  - Navigate to the downloaded file (**SourceRelevancy.zip**) and go to **Properties**. Ensure to unblock the file if it is blocked.
  - Right click on **SourceRelevancy.zip** and go to **Properties**. Ensure to unblock the file if it is blocked.
  - Unzip the file
  - Navigate to the DSP Installation folder (e.g. D:\BOA\DSP or C:\Program Files (x86)\BOA\DSP)

- Back up the DSP Install\BOA\DSP folder to a compressed zip file
- Back up all Syniti-supplied SQL Server databases or verify that a complete recent backup already exists
  - Supplied databases: AutoGen, cMap, cMap\_Data, cMass, cMass\_Data, Console, CranPort, CranSoft, DataConstructionServer, DataDialysis, DataGarage, DBMoto\_Client, DGE, DGE\_Data, dgReports, dgSAP, dspAddOn, DSPCommon, dspMonitor\_AccPak, dspMonitorConfig, DSW, IGC, Integrate, IntegrateStaging, InterfaceServer, MC, & RADToolkit
- Stop IIS

This process disconnects all active DSP users, so it is highly recommended to perform the install when no users are on the system. This process stops IIS on the web server.

- Open Windows *Start* Menu.
- Open the **Command Prompt** (run as an administrator).
- Type: **IISReset –stop**.
- Press the **Enter** key.
- Leave the Command Prompt window open for later use.
- Stop all services that start with “Cransoft Service ...”

This process stops all DSP background jobs, so it is highly recommended to perform the install when no scheduled operations are running on the system.

- Open Windows *Start* Menu.
- Select **Administrative Tools**.
- Run **Services**.
- Right-click the DSP service.
- Select **Stop**.
- Repeat the previous two steps for any additional DSP services.
- If present (not all packs have this folder), copy the **Web** folder from the zip file to your existing DSP install\Web folder. If prompted, replace the files in the destination.
- Copy the **Databases** folder from the zip file to your existing DSP install\Databases folder. If prompted, REPLACE the files in the destination.
- Navigate to DSP install\Databases and execute file **SourceRelevancyInstall.bat** (run as an administrator)
- Start all services that start with “Cransoft Service ...”

- Open Windows *Start* Menu.
- Select **Administrative Tools**.
- Run **Services**.
- Locate the DSP service(s).
- Right-click the DSP service.
- Select **Start**.
- Repeat the previous two steps for any additional DSP services.
- Start IIS
  - Open Windows *Start* Menu.
  - Open the **Command Prompt** (run as an administrator).
  - Type: **IISReset –start**.
  - Press the **Enter** key.

## Configure Access to Source Relevancy Pages

### User Security

Access to the Source Relevancy pages is controlled by 3 different WebApp Groups within the Construct WebApp:

- RelevancyPowerUser
- RelevancyUser
- RelevancyReadOnly

To grant users access to the pages, these WebApp Groups should be assigned to existing roles or new roles should be created and then users assigned to these roles.

The details of access provided by each WebApp Group is defined below.

### RelevancyPowerUser

PAGE ID ▼	ALLOW SELECT	ALLOW INSERT	ALLOW UPDATE	ALLOW DELETE
Construct : Relevancy Group Values	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Construct : Relevancy Groups	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Construct : Source Relevancy	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

### Navigating to Source Relevancy Pages

Users with access to one of the specified WebApp Groups will be able to access the Source Relevancy pages by navigating to the Construct WebApp via the horizontal toolbar within the Advanced Data Migration solution.

The Source Relevancy pages include security controls that ensure that users with access to the pages are only able to maintain relevancy rules for the Waves in which they have access to.

From a Stewardship Tier security point of view, this access is based upon the Roles that a user has been given access to and the Security Definition Key Values that are assigned to those roles.

In the Example 1 below, a user assigned to this role would have access to maintain relevancy rules for the MASTER\_S4 Wave as they would be assigned to a role in specific 2 object belonging to the MASTER\_S4 Wave are assigned

Example 1

**Security Roles** FILTER APPLIED  1 rows

S	NAME	DESCRIPTION	ROLE TYPE	Access All Data
<input checked="" type="checkbox"/>	Example Wave Access	Example Wave Access	Content	2

**Security Role Key Values** Role Name: Example Wave Access Security Definition: Console.Wave Access

SECURITY DEFINITION KEY	IS ROLE MEMBER
MASTER_S4 - SAM01P2P: P2P0380: Purchasing Contracts	
MASTER_S4 - SAM01SD: SD0080: Price Conditions	
MASTER_S4 - SAM01HCM: HCM070: Time Management	
MASTER_S4 - SAM01FM: FM0450: Cost Centre Group	<input checked="" type="checkbox"/>
MASTER_S4 - SAM01TM: TM0030: Freight Settlement	<input checked="" type="checkbox"/>
MASTER_S4 - SAM01P2P: P2P0080: Purchase Order	
MASTER_S4 - SAM01QM: QM0010: Inspection Methods	
DSP70_944 - MM: MATERIAL	
MASTER_S4 - SAM01PP: PP0250: Planned Independent Requirements	
MASTER_S4 - SAM01SM: SM0010: Repair Orders	
MASTER_S4 - SAM01WM: WM0070: Pick to Sequence	
CUSTWAVE1 - CM: CUSTOMER

<input checked="" type="checkbox"/>	Example Wave Access	Example Wave Access	Content	1

**Security Role Key Values** Role Name: Example Wave Access Security Definition: Console.Wave Access

SECURITY DEFINITION KEY	IS ROLE MEMBER
DSP Administrator Security Role	<input checked="" type="checkbox"/>

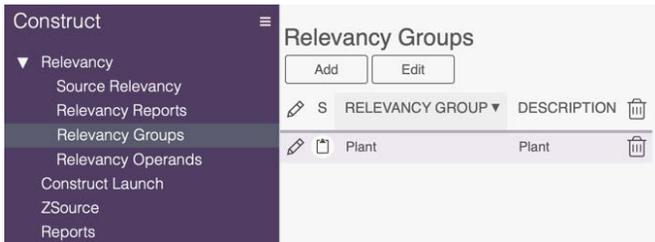

**Security Role Definitions** Example Wave Access

SECURITY DEFINITION	DESCRIPTION	Access All Data
DGE.Position	Position	0
DSPCommon.Administrator_Role	Access to all data	1

## Source Relevancy Pages Overview

### Page 'Relevancy Groups'

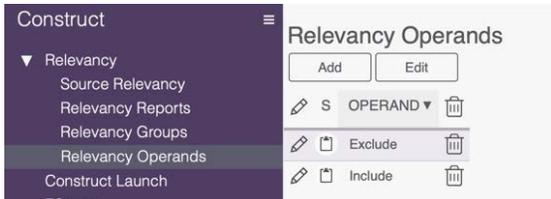

The Relevancy Groups pages is used to create groups which at the Wave / Source level (Relevancy Group Values page) can then have specific values assigned to indicate whether records with the value is Included or Excluded from the migration scope.

The Relevancy Groups can be found in table **DataConstruction.dbo.ztRelevancyOrgUnitType**.

### Page 'Relevancy Operands'

The Relevancy Operands page is used to create Operators that are available on the Relevancy Override page. By default, "Exclude" and "Include" are provided. Additional operands can be added as needed to support project requirements

The Relevancy Operands can be found in table **DataConstruction.dbo.ztRelevancyOperand**.

### Page 'Source Relevancy'

The Source Relevancy page is where users register the Waves and Sources for which relevancy criteria will be specified.

The definition of the fields on the horizontal view are below: -

<b>Wave ID</b>	This is the deployment Wave to which the documented relevancy rules belong to.
<b>Relevancy Wave ID</b>	This is the Wave in which the relevancy rules are implemented. There may be project scenarios whereby the relevant data set is defined in one relevancy wave and then each deployment wave uses these results.
<b>Wave Process Area ID</b>	This is the process area in the Relevancy Wave ID in which the relevancy rules are implemented.
<b>zSource</b>	This is the Source System to which the relevancy rules apply.

The definition of the fields on the vertical view are below: -

**General Tab**

Relevancy Group Type

Copy Relevancy Data

---

Copy From Source

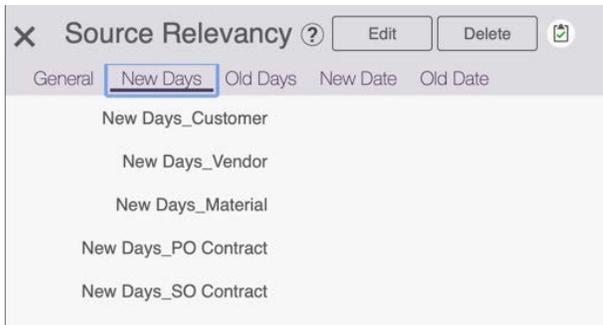

Copy

<b>Primary Language</b>	Primary language that is being used. This is used to identify relevant textual information
<b>Client</b>	Client number that the relevancy pertains to and is used as the first rule to set the relevant flag
<b>Last Client Refresh</b>	
<b>Vendor_InterCompany</b>	Identifier for Intercompany Vendor records
<b>Customer_InterCompany</b>	Identifier for Intercompany Customer records
<b>BOM Explosion Limit</b>	Number of recursive calls to be made to gather all subsequent component materials
<b>Relevancy Group Type</b>	Indicates whether records with Relevancy Group Values are either to be Excluded or Included from the dataset.
<b>Copy from Source</b>	Use to copy configuration from another zSource

**New Days Tab**

The “**New Days**” tab is used to identify the characteristics that will be utilized to identify an object that remains in scope, even without activity, if it falls within the “new days” calculations.

**Note** that you can only define New Days OR New Date, you cannot use both.

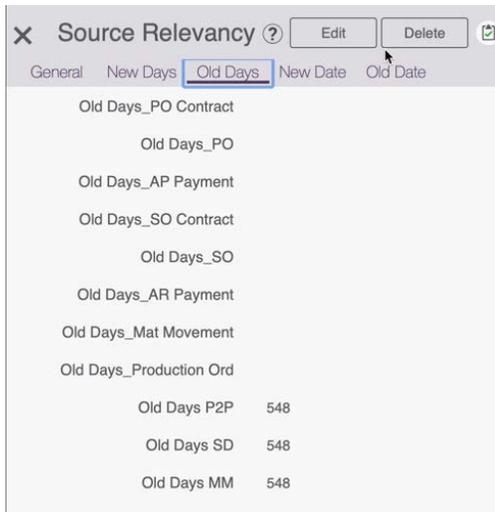

<b>New Days_Customer</b>	Number of days (considering refresh date) after entry date that a Customer is still considered a new Customer and should be included in the migration scope regardless of whether there is any transactional history.
<b>New Days_Vendor</b>	Number of days (considering refresh date) after entry date that a Vendor is still considered a new Vendor and should be included in the migration scope regardless of whether there is any transactional history.
<b>New Days_Material</b>	Number of days (considering refresh date) after entry date that a Material is still considered a new Material and should be included in the migration scope regardless of whether there is any transactional history.
<b>New Days_PO Contract</b>	Number of days (considering refresh date) after entry date that a Purchase Contract is still considered a new Purchase Contract and should be included in the migration scope regardless of whether there is any transactional history.
<b>New Days_SO Contract</b>	Number of days (considering refresh date) after entry date that a Sales Contract is still considered a new Sales Contract and should be included in the migration scope regardless of whether there is any transactional history.

**Old DaysTab**

The “**Old Days**” tab is used to identify the timeframe, in days, that will be utilized to identify records that will fall out of scope due to their age. Once transactions or items reach the days from the refresh date (defined on the “General” tab), the object falls out of scope unless specifically overridden.

**Note:** Users can only define Old Days OR Old Date, you cannot use both.

**Vendor Relevant Parameters**

<b>Old Days_PO Contract</b>	Number of days (considering refresh date) after document creation that the record is considered part of the relevant determination of Vendor
<b>Old Days_PO</b>	Number of days (considering refresh date) after document creation that the record is considered part of the relevant determination of Vendor
<b>Old Days_AP Payment</b>	Number of days (considering refresh date) after clearing date that the record is considered part of the relevant determination of Vendor
<b>Old Days P2P</b>	Flexible field to be used as required.

**Customer Relevant Parameters**

<b>Old Days_SO Contract</b>	Number of days (considering refresh date) after document creation that the record is considered part of the relevant determination of Customer
<b>Old Days_SO</b>	Number of days (considering refresh date) after document creation the record is considered part of the relevant determination of Customer
<b>Old Days_AR Payment</b>	Number of days (considering refresh date) after clearing date that the record is considered part of the relevant determination of Customer
<b>Old Days SD</b>	Flexible field to be used as required.

**Commented [TK1]:** confirm that include vs exclude is really configurable

**Commented [TK2R1]:** Only Exclude is allowed at this time

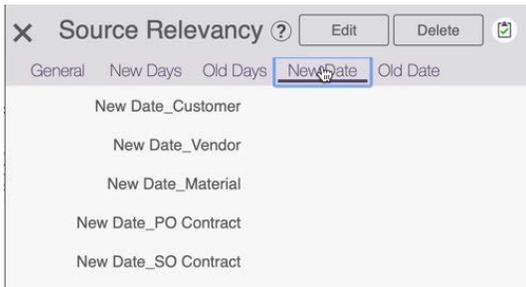

**Material Relevant Parameters**

<b>Old Days_MatMovement</b>	Number of days (considering refresh date) after material document date that the record is considered part of the relevant determination of Material
<b>Old Days_ProductionOrder</b>	Number of days (considering refresh date) after completed of a Production Order that the record is considered part of the relevant determination of Material
<b>Old Days MM</b>	Flexible field to be used as required.

**New Date Tab**

The “**New Date**” tab is used to identify the timeframe, based on a specific date, that will be utilized to identify records that will remain in scope regardless of the activity for that record. The fields are similar as used to define “NewDays” above.

**Note:** Users can only define New Days OR New Date, you cannot use both.

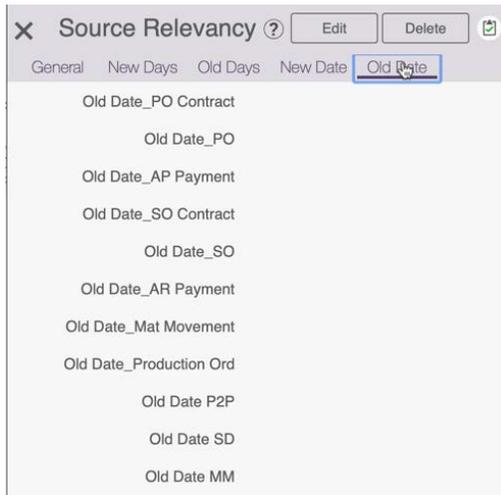

<b>New Date_Customer</b>	The date less than or equal to the entry date when a Customer is still considered a new Customer and subsequent transactional relevant requirements do not apply
<b>New Date_Vendor</b>	The date less than or equal to the entry date when a Vendor is still considered a new Vendor and subsequent transactional relevant requirements do not apply
<b>New Date_Material</b>	The date less than or equal to the entry date when a Material is still considered a new material and subsequent transactional relevant requirements do not apply
<b>New Date_PO Contract</b>	The date less than or equal to the entry date when a Purchasing contract is still considered new and subsequent transactional relevant requirements do not apply
<b>New Date_SO Contract</b>	The date less than or equal to the entry date when a Sales Order contract is still considered new and subsequent transactional relevant requirements do not apply

**Old Date Tab**

The “**Old Date**” tab is used to identify the timeframe, based on a specific date, that will be utilized to identify records that will fall out of scope due to their age. If activity occurs prior to the specified date, the item falls out of scope unless specifically overridden. The fields used are similar to those above on “Old Days”.

**Note:** Users can only define Old Days OR Old Date, you cannot use both.

**Vendor Relevant Parameters**

<b>Old Date_PO Contract</b>	The date from which PO Contracts are considered part of the relevant determination of Vendor
<b>Old Date_PO</b>	The date from which Purchases Orders are considered part of the relevant determination of Vendor
<b>Old Date_AP Payment</b>	The date from which Account Payables Records are considered part of the relevant determination of Vendor
<b>Old Date P2P</b>	Flexible field to be used as required.

**Customer Relevant Parameters**

<b>Old Date_SO Contract</b>	The date from which Sales Contracts are considered part of the relevant determination of Customer
-----------------------------	---

<b>Old Date_SO</b>	from which Sales Orders are considered part of the relevant determination of Customer
<b>Old Date_AR Payment</b>	The date from which Accounts Receivable records are considered part of the relevant determination of Customer
<b>Old Date SD</b>	Flexible field to be used as required.

**Material Relevant Parameters**

<b>Old Date_MatMovement</b>	The date from which Material Movement records are considered part of the relevant determination of Material
<b>Old Date_ProductionOrder</b>	The date from which Production / Process Orders are considered part of the relevant determination of Material
<b>Old Date MM</b>	Flexible field to be used as required.

The parameters defined on the Source Relevancy pages can be found in table **DataConstruction.dbo.dcsSourceRelevancy**.

**Page 'Relevancy Group Values'**

The Relevancy Group Values page is where users specify which values for each 'Relevancy Group' are to be either **Included** or **Excluded** from the dataset that is relevant for migration. The Relevancy Groups allowed here were configured in "Relevancy Group" page.

To maintain Relevancy Group Values, click Relevancy Group Values Icon  on the SourceRelevancy record.

Relevancy Group Values			
Z SOURCE	GROUP	GROUP VALUE	
SAP_ECC	Customer Account Group	CPD	
SAP_ECC	Plant	R315	
SAP_ECC	Vendor Account Group	CPD	
SAP_ECC	Company Code	SL01	
SAP_ECC	Purchasing Organization	SL31	

This data is stored in table **DataConstructionServer.dbo.dcsSourceRelevancyOrgUnit**.

### Page 'Relevancy Override

The Relevancy Override page is where users can define specific records to be included or excluded from the relevant migration dataset.

The maintain Relevancy Override records, click the Override Icon  on the SourceRelevancy record

Source Relevancy				
WAVE ID	RELEVANCY WAVE ID	WAVE PROCESS AREA ID	Z SOURCE	ACTIVE
Central - Relevancy / Cross Ref / Reusable Code	Central - Relevancy / Cross Ref / Reusable Code	Relevancy	SAP	<input checked="" type="checkbox"/>

Following are some examples for reference:

WAVE ID	Z SOURCE	OBJECT	OPERAND	LEGACY PRIMARY KEY	ACTIVE
Central - Relevancy / Cross Ref / Reusable Code	SAP_ECC	Customer Master Relevancy Processing	Exclude	0000010302	<input checked="" type="checkbox"/>
Central - Relevancy / Cross Ref / Reusable Code	SAP_ECC	Vendor Master Relevancy Processing	Exclude	0000000015	<input checked="" type="checkbox"/>
Central - Relevancy / Cross Ref / Reusable Code	SAP_ECC	Vendor Master Relevancy Processing	Include	0000000025	<input checked="" type="checkbox"/>

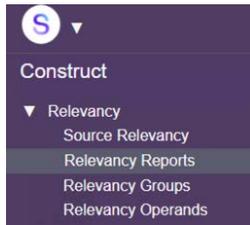

Each entry can be flagged as Active or not.

The data for Overrides is stored in table `DataConstructionServer.dbo.dcsRelevancyOverride`.

### Page 'Relevancy Reports'

The Relevancy Reports page shows all the Transform Target Reports related to the Relevancy Wave(s)/ Process Area(s) registered on the Source Relevancy page.

The reports can be accessed by clicking the 'Relevancy Report' option in the relevancy menu.
